## II. CLAIMS

1. (Currently Amended) Diagnostic procedure for identification of a disorder of a pancreas in a patient comprising determining an overall content of all known pancreatic elastases (iso-enzymes) in the patient's serum, secretions or excretions of a patient, so as to thereby diagnose a disorder of the pancreas by administering immuno-chemical systems using monoclonal or polyclonal antibodies, being single specific antibodies or cross-reactive antibodies that can recognize all elastase iso-enzymes but which cannot recognize the antigen with the amino-acid sequence Thr-Met-Val-Ala-Gly-Gly-Asp-Ile-Arg (SEQ ID NO: 1).
2. Cancelled
3. (Currently Amended) The procedure according to claim 1 ~~claim 2~~, comprising obtaining antibodies by means of antigens selected from the group consisting of complete elastases 1, 2 and 3 or of their sub-units wherein the amino-acid sequence Thr-Met-Val-Ala-Gly-Gly-Asp-Ile-Arg (SEQ ID NO: 1) is not used as an elastase fragment or as an immunologically effective partial sequence thereof.
4. (Currently Amended) The procedure according to claim 3, wherein the following synthetic peptides are ~~primarily~~ used as antigens ~~antigenes which after the antigens of animals to~~ induce antibodies which cross-reactively recognize several elastases ~~but do not concern~~ with the exception of the amino-acid sequence Thr-Met-Val-Ala-Gly-Gly-Asp-Ile-Arg (SEQ ID NO: 1):
